# Hazardous Weather

Thunderstorm chances will increase late this afternoon into this evening as a cluster or line of storms moves out of eastern New Mexico. The most intense activity will be capable for producing wind gusts to 60-70 mph, hail to 1-2 inches in diameter and brief heavy rainfall.

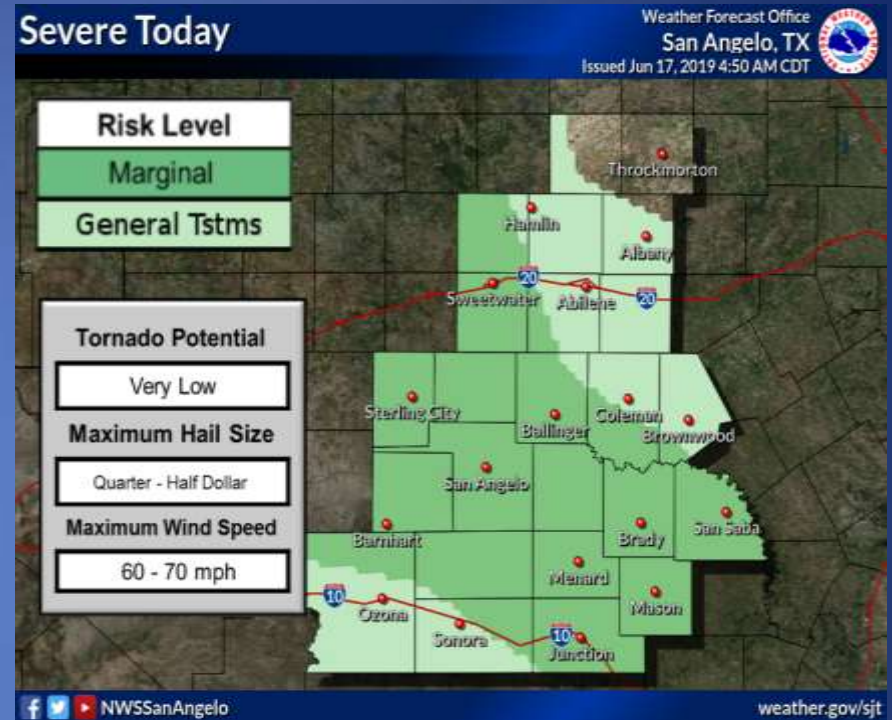

Thunderstorm Chances will be on the increase late this afternoon and tonight, as the next wave of energy moves across the Panhandles.

# Hazardous Weather

Looks to be another hot and humid day expected across the Rio Grande Valley and deep south Texas, with peak afternoon heat indices or "feels like" temperatures between 108 and 112 degrees. Isolated rain showers and thunderstorms will be possible today, with the most concentration across the coastal counties. Otherwise, skies will be partly cloudy. Mariners should exercise caution on the lower Texas Gulf coastal waters.

An isolated severe storm possible today and tonight.

# Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
